

What caused the collapse of the Bronze Age?

The collapse of the Bronze Age, particularly in the eastern Mediterranean and Near East, is a complex historical event that occurred around the end of the Late Bronze Age, roughly between the 12th and 11th centuries BCE. Several factors contributed to this collapse, and it is important to note that the collapse did not happen uniformly across all regions. Instead, it affected different areas to varying degrees. What are some of the key factors that contributed to the collapse of the Bronze Age civilizations?
